

Runtime Configuration

Runtime Options

These are flags you can pass to `dontstarve_dedicated_server_nullrenderer` that impact the server's behaviour.

These are the most common options

Name	Default	Description
<code>persistent_storage_root</code>	<code>~/klei</code>	The directory that your configuration directory resides in. Has to be an absolute path.
<code>conf_dir</code>	<code>DoNotStarveTogether</code>	Changes the name of the configuration directory. Cannot contain slashes. This directory is what follows the <code>persistent_storage_root</code> in your config path. <code><persistent_storage_root>/<conf_dir></code>
<code>cluster</code>	<code>Cluster_1</code>	The directory specifies where your cluster configs will be (cluster.ini). It follows after the <code>conf_dir</code> <code><persistent_storage_root>/<conf_dir>/<cluster>/cluster.ini</code>
<code>shard</code>	<code>Master</code>	Name of the shard you're launching. This also corresponds to where the shard configurations will be. <code><persistent_storage_root>/<conf_dir>/<cluster>/<shard>/server.ini</code>

The full list can be seen here on [Klei's Site](#) (Though its likely out of date)
